

# The JUDGE™ stops varmints 4 ways!

Varmints are opportunists. They are looking for a free meal and game feeders are an easy target. The problem is, varmints can eat a lot of feed and can cause damage. That's what The JUDGE™ is designed to stop!

1 1/4" Varmint Guard's restricted opening.

## 1 The JUDGE's revolutionary Varmint Guard™ shield prevents access to feed, motor, hopper and spinner

The JUDGE features a 16-gauge, galvanized steel plate located on the underbelly of the feeder which leaves a mere 1 1/4" opening. Feed can project out, but varmints can't get in! This patented Varmint Guard™ shield keeps varmints from getting at the feed, as well as from the motor, hopper and spinner.

## 2 Lockdown™ sliding hopper lid latches securely

Varmints are crafty. Anything but the most secure hopper lid is vulnerable to four-legged feed thieves. The JUDGE's Smooth-Glide™ hopper lid and access door feature a latch mechanism that varmints simply cannot solve. This Lockdown™ latch design means no varmint pilfering and no lost feed.

## 3 InsideJob™ design – timer and battery are housed internally and away from varmints

If you run feeders, you know varmints can get into everything. Timer and battery are secured inside the feeder. Access panel doors can be fitted with an optional slotted cam latch for extra security (not included).

## 4 All internal wiring – no exposed wires for varmints to chew

There are no exposed wires for varmints to chew or rip out. All internal wiring means nothing is exposed for varmints to chew or rip out. On all Judge feeders, this WireAway™ system means you'll never show up to find the feeder has been shut down by chewed wires.

Revolutionary Varmint-Guard™ shield keeps varmints from getting at your feed!

Short and stout.  
Keeps varmints out!

The **JUDGE™** Varmint-Proof Feeders are built tough and made to last!

Tired of varmints? See the Judge!

**DOWN-TO-EARTH™**  
DESIGN

Built closer to the ground for easier filling, added stability

- **No ladder needed** – feeders can be easily reached and filled at ground level
- **Lower center of gravity** makes the feeder more stable
- **Easier to set up**
- **Can be transported** in the bed of a pickup truck without disassembly

**Smooth-Glide™**

Smooth-Glide™ lid:  
– No "screeching" while sliding  
– LockDown™ latch design – 35 lbs. of latch pressure deters varmints

Powder-coated, heavy gauge galvanized steel construction

Premium high-torque 12V motor is mounted on the inside of the hopper

WireAway™ fully protected internal wiring

**RIGHTFIT™**

Heavy, 12-gauge RightFit™ leg braces feature tight tolerances, minimal "play" for added stability

Oversize compartment door is de-burred for easy access to battery, timer and wiring

Heavy-duty tubular steel feeder legs

Oversize, pre-drilled holes in feet for staking down

Rugged "oven" treated powdercoat finish

Rain Guard™ protects against internal moisture

Two-panel overlap design minimizes seams and bolt holes, creating fewer points of water ingress

Elongated sight window for monitoring feed level

Built-in, pre-wired, adjustable solar panel

InsideJob™ design – battery and timer are housed inside the feeder walls

**Full Flow™**  
Full-Flow internal design – no ledges on which corn can collect

Custom spinner plate launches corn farther, minimizes spillage

Adjustable, revolutionary Varmint Guard™ shield keeps varmints at bay. Feed can be projected out through a 1.25" space, but varmints can't get in!

**J-500**

- Capacity: 500 lbs. of feed
- Height: 56"
- Weight: 175 lbs.
- Hopper: 35" x 35" x 25"
- Motor: High torque 12V
- Solar Panel: 5.5" x 6" adjustable (built in)
