

The **JUDGE**TM
VARMINT-PROOF FEEDERS

*Revolutionary
Varmint GuardTM shield
keeps varmints from
getting at feed*

**Short and stout.
Keeps varmints out!**

The JUDGE™ Varmint-Proof Feeders stop varmints four ways!

Varmints are opportunists. They are looking for a free meal and game feeders are an easy target. The problem is, varmints can eat a lot of feed and can cause damage. That's what The JUDGE™ is designed to stop!

The **JUDGE™**
VARMINT-PROOF FEEDERS

1. The JUDGE's revolutionary Varmint Guard™ shield prevents access to feed, motor, hopper and spinner

The JUDGE features a 16 gauge, galvanized steel plate located on the underbelly of the feeder which leaves a mere 1 3/4" opening. Feed can easily project out, but varmints can't get in! This patented Varmint Guard™ shield keeps varmints from getting at the feed, as well as from the motor, hopper and spinner.

Varmints have a field day with other feeders, getting at the feed for a free meal!

2. Lockdown™ sliding hopper lid latches securely

Varmints are crafty. Anything but the most secure hopper lid is vulnerable to four-legged feed thieves. The JUDGE's Smooth-Glide™ hopper lid and access door feature a latch mechanism that varmints simply cannot solve. This Lockdown™ latch design means no varmint pilfering and no lost feed.

3. InsideJob™ design – timer and battery are housed internally and away from varmints

If you run feeders, you know that varmints can get into everything. That's why we put our timer and battery inside the feeder. This InsideJob design ensures varmints won't be able to cause havoc with the feeder's power system.

4. All internal wiring – no exposed wires for varmints to chew

There are no exposed wires for varmints to chew or rip out. All internal wiring means nothing is exposed for varmints to chew or rip out. On all Judge feeders, this WireAway™ system means you'll never show up to find the feeder has been shut down by chewed wires.

1 1/4" Varmint Guard's restricted opening (adjusts from 1" – 1 3/4") lets feed out, keeps varmints away.

The JUDGE™ Varmint-Proof Feeders are built tough and made to last!

DOWN-TO-EARTH™
DESIGN

Built closer to the ground
for easier filling, added stability

Because our feeders are built lower to the ground, you can get in, but varmints still can't

- No ladder needed – feeders can be easily reached and filled at ground level
- Lower center of gravity makes the feeder more stable
- Easier to set up
- Can be transported in the bed of a pickup truck without disassembly

Smooth-Glide™ lid:

- No "screeching" while sliding
- LockDown™ latch design –35 lbs. of latch pressure deters varmints

Smooth-Glide™

Powder-coated, galvanized 18-gauge steel construction

Premium high-torque 12V motor is mounted on the inside of the hopper

WireAway™ fully protected internal wiring

RIGHTFIT™

Heavy, 12-gauge RightFit™ leg braces feature tight tolerances, minimal "play" for added stability

Oversize compartment door is de-burred for easy access to battery, timer and wiring

InsideJob™ design – battery and timer are housed inside the feeder walls

Heavy-duty tubular steel feeder legs

Rugged "oven" treated powdercoat finish

Rain Guard™ protects against internal moisture

Two-panel overlap design minimizes seams and bolt holes, creating fewer points of water ingress

Seams sealed with 3M weatherproof sealant

Built-in, pre-wired, adjustable solar panel

Covered sight window for monitoring feed level

Full-Flow internal design – no ledges on which corn can collect

Custom spinner plate launches corn farther, minimizes spillage

Adjustable, revolutionary Varmint Guard™ shield keeps varmints at bay. Feed can be projected out through a 1" to 1 3/4" space, but varmints simply can't get in!

Oversize, pre-drilled holes in feet for staking down

Short and stout. Keeps varmints out!

There's a JUDGE™ feeder that's right for you!

J-200

Capacity: 200 lbs. of feed
Height: 55"
Weight: 85.4 lbs.
Size: 23" x 22" x 22"
Motor: High torque 12V
Solar Panel: 5.5" x 6" adjustable (built in)

J-300

Capacity: 300 lbs. of feed
Height: 59"
Weight: 92.4 lbs.
Size: 36.5" x 22" x 22"
Motor: High torque 12V
Solar Panel: 5.5" x 6" adjustable (built in)

J-600

Capacity: 600 lbs. of feed
Height: 69"
Weight: 162.4 lbs.
Size: 38" x 28" x 28"
Motor: High torque 12V
Solar Panel: 5.5" x 6" adjustable (built in)

“Finally, somebody has built a game feeder that isn't a varmint feeder first. Nicely done!”

“I love that I can load the feeder without a ladder.”

“The Judge is one tough feeder. This thing is built to last!”

“Whoever designed this feeder knew exactly what I was looking for. I'll be buying more Judge feeders!”
